

RATTLE GRATE Trackout Control

Rattle Grates are used for stabilized construction entrances. Rattle Grate provides the most effective method to reduce jobsite dirt and debris from being tracked onto public roadways.

Rattle Grates are designed as a solution to the most demanding trackout needs. Its' highly aggressive design will keep mud, dirt, and debris on the jobsite and off the street.

These grates are strong and tough, easily holding up to all rubber tire wheeled vehicle traffic. A ramp is built into the grate, eliminating the need to rent a separate ramp.

- Weight: 2,200 pounds each
- Dimension: 10' X 8'
