FILTREXX SILTSOXX

We invented the superior alternative to silt fence and straw wattles.

Filtrexx® SiltSoxx™ is a three dimensional tubular device made of FilterMedia™, encased in Filtrexx® Mesh™. It is designed to support stormwater management, sediment & erosion control and pollutant removal. Best Management Practices (BMPs). It is generally used in areas where delimiting at risk areas and diverting, cleaning and filtering stormwater runoff is critical. SiltSoxx is often used in combination with other sediment control systems to create a complete solution. Most typical applications are check dam, concrete washout, inlet protection, perimeter control, runoff diversion, slope interruption, sediment traps and diverse filtration systems.

CHECK DAM

Slow and interrupt stormwater runoff easily

learn more

CONCRETE WASHOUT

Reliable trapping of sediment and soluble pollutants

INLET PROTECTION
Filter stormwater runoff and protect drain inlets [learn more](https://www.filtrexx.com/en/applications/sediment-control/inlet-protection)

[PERIMETER CONTROL](https://www.filtrexx.com/en/applications/sediment-control/perimeter-control)

Delimit areas and install barriers to retain sediments [learn more](https://www.filtrexx.com/en/applications/sediment-control/perimeter-control)
Filtrexx®
RUNOFF DIVERSION

Redirect stormwater runoff from areas
at risk towards designated secured areas

learn more

Filtrexx®
SEDIMENT TRAP

Build temporary dry pond
detention systems
learn more

Reduce slope length and
stormwater runoff velocity
learn more

Contact Filtrexx

Our team is ready to assist you. Please describe your interest and we'll respond within 2 business days. If you need immediate assistance, please call during standard office hours.
